Over 1,500 architects & engineers are calling for a new, genuine, independent investigation.

Architects & Engineers for 9/11 Truth
Architects & Engineers for 9/11 Truth is a non-profit corporation – a non-partisan association of architects, engineers, and affiliates dedicated to exposing the falsehoods and revealing truths about the destruction of the World Trade Center high-rises on 9/11/01. Visit our website. Educate yourself. Take action!

Why We Are Re-Examining the Destruction of the World Trade Center
There was never a proper investigation. NIST and FEMA excluded critical forensic evidence that is described in this and other documents at AE911Truth. We at AE911Truth have assessed the forensic evidence.

The evidence exposes the false official reports by the 9/11 Commission, FEMA, and NIST (National Institute of Standards and Technology). Every week architects, engineers, and others continually sign our petition calling for a new investigation. Join Us!

Learn More at AE911Truth.org
A vast array of information and resources is available on our website, including informative DVDs that feature dynamic multimedia presentations by Richard Gage, AIA, and many other experts.

The DVDs
AE911Truth exposes NIST falsehoods – A localized failure in a steel-framed building like WTC 7 cannot cause a catastrophic collapse like a house of cards at free-fall acceleration without a simultaneous and patterned loss of several of its columns at key locations within the building.
— Kamal Obeid, PE, Structural Engineer

The Website
The destruction was too symmetrical to have been eccentrically generated. The destruction was symmetrically initiated to cause the buildings to come apart as they did.
— Harry Robinson III, FAIA, Architect

World Trade Center Building 7: A 47-story skyscraper NOT hit by an airplane that was the third tower destroyed on September 11th.

The destruction of WTC 7 has all the characteristics of a controlled demolition with explosives:

- The building fell almost symmetrically straight down in less than 7 seconds – and at free-fall acceleration for 8 stories – admitted by the National Institute of Standards and Technology (NIST).
- The overall building mass falls uniformly through what was the path of greatest resistance. This requires a precisely timed, patterned removal of critical columns.
- The kink in the roofline is characteristic of a demolition timing sequence where the walls are collapsing inward.
- The structure of a large, fireproofed steel-framed building cannot be completely destroyed by localized pockets of small fires nor by “thermal expansion” as claimed by NIST.

A single, localized failure. i.e., NIST’s unseated girder, could not cause the systematic and total failure of 400 other structural steel connections per second.

Numerous incidents and recorded statements reveal foreknowledge. These include a countdown, warnings, and announcements from both CNN and the BBC of the “collapse”... before it even happened!

### Evidence Excluded from the NIST Report

1. Most of the debris ended up in this compact pile – centered within the original footprint.
2. The 47-story steel-framed structure was dismembered and reduced to a small pile only a few stories high – with near complete destruction – unmistakable signs of a controlled demolition with explosives.
3. Extremely high temperatures far above those of normal office fires, persisted for weeks in the pile, as indicated by various sources (e.g. infrared images by MTI, EarthData and NASA).
4. The Federal Emergency Management Agency (FEMA) documented in Appendix C of its report a “severe high temperature corrosion attack on the steel” – sulfur and molten iron penetrated into the steel. Office/jet fuel fires cannot account for this. Other research revealed the signature of thermit, which creates molten iron.
5. FEMA’s May 2002 report acknowledged that its hypothesis that fire caused the destruction had only a “low probability of occurrence” and that “further investigation and analysis were required”, although by that time, almost all WTC 7 steel crime scene evidence had already been illegally removed and destroyed.

Heavy structural steel pieces were ejected laterally, many of them leaving rapidly expanding dust and smoke trails – a geometry caused by explosives – not gravitational collapse.
