500 Architects & Engineers for 9/11 Truth Demand New Investigations; Founding Member to Tour Nine European Cities

New evidence contradicting U.S. government explanations of the destruction of the World Trade Center buildings on 9/11 will be presented by a San Francisco Bay Area architect in nine cities in his first European tour November 6 to 21st. Richard Gage, AIA, founder of Architects & Engineers for 9/11 Truth, will discuss evidence unexplained by the government reports.

New evidence contradicting U.S. government explanations of the destruction of the World Trade Center buildings on 9/11 will be presented by a San Francisco Bay Area architect in nine cities in his first European tour November 6 to 21st. Richard Gage, AIA, founder of Architects & Engineers for 9/11 Truth, will discuss evidence unexplained by the government reports.

It's been more than 7 years since 9/11, and while the details of that horrific day are beginning to wane in the public's mind, few would deny that the sea of change in domestic and foreign policies around the world which were hurriedly ushered in after 9/11 continue to affect our lives.

Whether it is the reported million-plus casualties in Iraq and Afghanistan, anti-terror legislation which have gone some way to dismantling the civil liberties westerners had come to take for granted, or the growing surveillance powers sweeping the UK, 9/11 has had at least an indirect effect on us all.

The relevance people feel 9/11 still has on their lives, has increased if anything, and there is no better indicator of this than the prevalence of conspiracy theories, and the ever growing numbers of the population giving them credence. Instrumental to this ground-swell in critical opinion of the official story are the rising number of credible figures supporting them, and there is no better example of this than the coalition Architects and Engineers for 9/11 Truth. The group is comprised of over 500 Architects and Engineers who publicly demand a new investigation into the event. Following highly successful U.S. tours, they are now crossing the Atlantic to tour across Europe, including London, this November.

The group was founded and is led by Richard Gage, AIA, an architect of 20 years who designs steel-framed fire-proofed structures. In his presentation he promises to discuss the shortcomings of the official investigations: suppressed, ignored, and destroyed evidence; faulty computer models; contradictory collapse mechanisms; and implausible assumptions. Ultimately, Gage claims, there is a growing body of evidence to suggest the twin towers and world trade centre seven were brought down through controlled demolition.

Gage's claims and those of the group he is representing on this tour may raise eyebrows and stir tempers, but there is no questioning that these experts in building design are qualified to analyse the building failures, and considering the changes in our way of life 9/11 has been used to justify, it may be time to start at least listening to what they have to say.

"The over 500 A&E's that I represent want to know why the official reports left out all of the crucial scientific forensic evidence of the explosive controlled demolition of all 3 WTC high-rise buildings on 9/11." — Richard Gage, AIA
